MICROTOME

MICROTOME

Used in Histopathology, Traditional Histology Technique, Cryosectioning Technique, Microscopy.
Also known as Histomes, Cryostats.

BHTP-201 FULLY AUTOMATIC MICROTOME

Full-automatic sectioning with adjustable speed and three sectioning modes continuous, step and single. LED display. Electronic trim function makes it easy to switch from trim and section mode. Specimen retraction mechanism protects specimen from unintended blade damage. Section counting function counts total section pieces and total thickness.

Unit contains a precise micro motion specimen feeding system which uses a micro computer, optical signal and stepper motor to control specimen feeding resulting in more precise specimen feeding. Internationally accepted slide mechanism and groove ensures the precision of specimen movement while making the unit free from lubrication and maintenance requirements.

Unit contains a handwheel force balancing system for adjusting the balancing force during sectioning, making rotation even and smooth. Two safety locking mechanisms on the handwheel; one locks on the top; the other locks at any position. The disposable blade can move horizontally to avoid the dangers of unintended contact with the blade. Every blade cuts specimen into three equal parts, which ensures the entire use of blade Edge. The waste tray collects sectioning debris are easily removed for cleaning. Cassette clamp and C clamp are optional. Specimen orientation on X/Y axes 8°. Alarm to warn of forward or backwards limitation. Self-diagnostic prompt. Emergency stop and foot switch (optional)

BHTP-202 SEMI AUTOMATIC MICROTOME

It adopted the advanced import actuation system so that can slice the tissues more precisely ,more reliable and quiet.

The LCD display show the slice and trimming thickness ,section counter in Chinese or English version.

It have special function of sample retraction .it can avoid the damage due to the attrition between sample and the back of knife so that the slice is more smooth and the life of the knife is more longer. The hand wheel can be locked in any position to make the section as safe and convenient as possible. The waste bath can be disassembled easily. It has safety alarm system.

BHTP-203 ROTARY MICROTOME

It have clipper –built case , the user can put blade , wax block ,or other consumable one the top of case. It do not need to lubricate and maintain the microtome frequently. The handwheel in the right can be locked in any position, and the handle can be locked in highest

position, it is double safe for changing blade or tissue block. The specimen Orienting system axes X and Y 8°, axis 180°. It adopt the special blade holder , it is more safe and convenient to use the disposable blade

Directly. It also can to longer the user life of disposable blade.
